

# **S&P/EXPERIAN CONSUMER CREDIT DEFAULT INDICES SHOW BANK CARD DEFAULT RATES DRIVING COMPOSITE RATE HIGHER IN JANUARY 2018**

## **Bank Card Default Rates at Highest Level Since May 2013**

**NEW YORK, FEBRUARY 20, 2018:** S&P Dow Jones Indices and Experian released today data through January 2018 for the S&P/Experian Consumer Credit Default Indices. The indices represent a comprehensive measure of changes in consumer credit defaults and show that the composite rate increased four basis points from last month to 0.95%. The bank card default rate rose 13 basis points to 3.57%. The auto loan default rate fell three basis point from December to 1.07%. The first mortgage default rate increased four basis points to 0.72%.

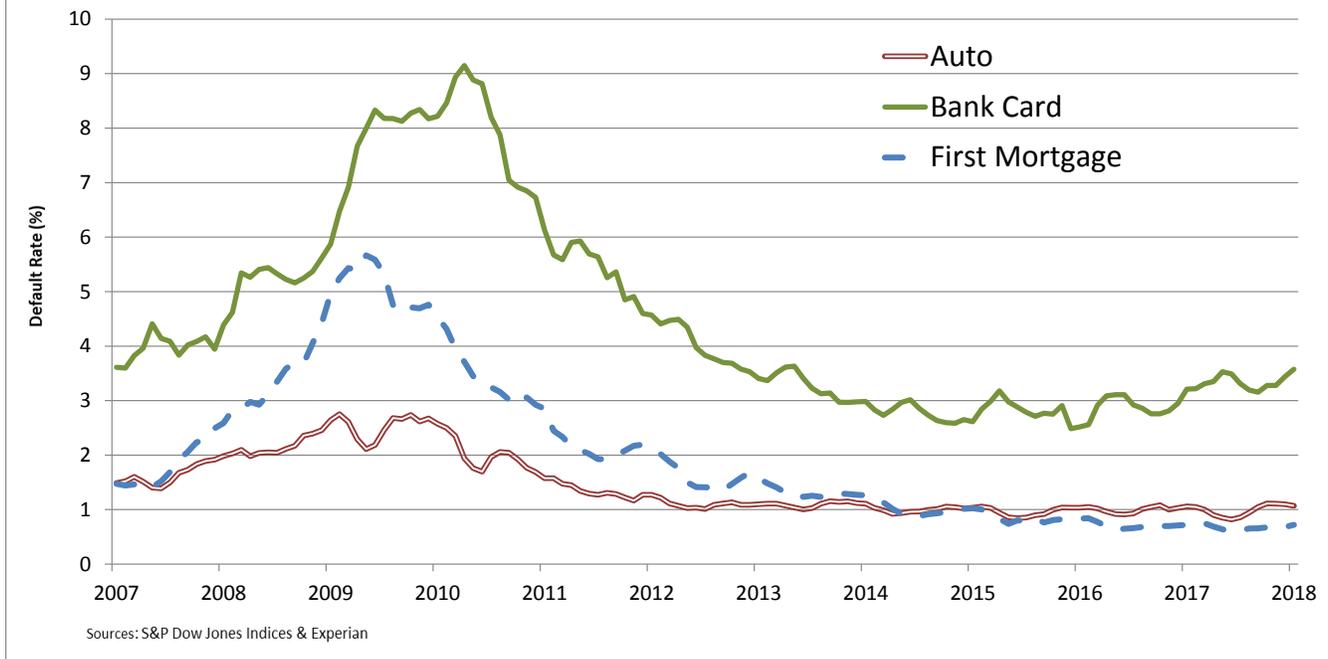

None of the five major cities saw a decline in composite default rates in January. Miami had the largest increase, up 29 basis points to 1.27%. Chicago recorded an increase of eight basis points to 1.23%, while Dallas was two basis points higher in January at 0.87%. The default rates for New York and Los Angeles were both unchanged, at 0.95% and 0.77% respectively.

The composite default rate has crept steadily higher over the past several months, largely driven by bank card default rates, which are up 42 basis points since September 2017 and have now reached a nearly four-year high. Auto loan and first mortgage default rates remain stable – at levels almost identical to those observed one year ago.

“The economy is growing, consumers are bullish and they’re spending money,” says David M. Blitzer, Managing Director and Chairman of the Index Committee at S&P Dow Jones Indices. “We are seeing the usual result of spending growth: modest increases in consumer credit defaults – especially in bank cards – and overall increases in the level of debt in the economy. Neither the defaults nor the amount of debt outstanding are immediate problems. The Federal Reserve is expected to continue raising interest rates. Home mortgage rates, which respond to movements in the financial markets, have risen from 4% to about 4.4% since the beginning of 2018. Although interest rates have increased, there are few signs of financial tightness or increased difficulties in qualifying for loans. Rates on bank cards tend to be more stable but higher than mortgage or auto loan rates.

“After several years of policymakers seeking to increase the rate of inflation, the last few weeks have shown fears of higher inflation creating turmoil in the stock market amidst sharply higher volatility. Neither inflation fears nor the turbulent market threaten immediate damage to consumer spending or borrowing. While roughly half of households in America have some exposure to the stock market through pensions, IRAs or similar retirement accounts, less than 15% directly own stocks. Despite the current excitement about inflation, the actual rate of price or wage increases hasn’t changed much.”

## National S&P/Experian Consumer Credit Default Indices

The table below summarizes the January 2018 results for the S&P/Experian Credit Default Indices. These data are not seasonally adjusted and are not subject to revision.

<b>S&amp;P/Experian Consumer Credit Default Indices</b>

#### ABOUT THE S&P/EXPERIAN CONSUMER CREDIT DEFAULT INDICES

Jointly developed by S&P Dow Jones Indices LLC and Experian, the S&P/Experian Consumer Credit Default Indices are published on the third Tuesday of each month at 9:00 am ET. They are constructed to track the default experience of consumer balances in four key loan categories: auto, bankcard, first mortgage lien and second mortgage lien. The Indices are calculated based on data extracted from Experian's consumer credit database. This database is populated with individual consumer loan and payment data submitted by lenders to Experian every month. Experian's base of data contributors includes leading banks and mortgage companies, and covers approximately \$11 trillion in outstanding loans sourced from 11,500 lenders.
